In 2005 the Marine Board - ESF established a Working Group (consisting of nominated experts) on remote sensing of shelf sea ecosystems, with a remit to review the state of the art and to make recommendations about research priorities and organisational changes needed to advance the application of scientific knowledge in this subject area. The context for the study is the increasingly urgent requirement for regular monitoring of shelf sea ecosystems in order to meet international treaty ...

Remote sensing of shelf sea ecosystems: state of the art

Looking forward, it is clear that diffuse attenuation coefficients and euphotic depths derived by optical remote sensing can provide important inputs to thermal stratification and primary production calculations in coupled physical/biological models of shelf sea ecosystems.

PRINCIPLES OF REMOTE SENSING Shefali Aggarwal Photogrammetry and Remote Sensing Division Indian Institute of Remote Sensing, Dehra Dun Abstract : Remote sensing is a technique to observe the earth surface or the atmosphere from out of space using satellites (space borne) or from the air using aircrafts (airborne). Remote sensing uses a part or several parts of the electromagnetic spectrum. It ...

remote sensing is to have an energy source which illuminates or provides electromagnetic energy to the target of interest. ... The light which our eyes - our "remote sensors" - can detect is part of the visible spectrum. It is important to recognize how small the visible portion is relative to the rest of the spectrum. There is a lot of radiation around us which is invisible to our eyes, but ...
