reconstruct the signal from the samples, then you have done a proper sampling and captured the key signal information Definition: The sampling frequency f_s , is the number of samples per second. This is to be compared with the signal cyclic frequencies Examples of proper sampling: The continuous analog signal (constant DC value or cosine

Sampling: DAC and ADC conversion

Sampling is defined as, "The process of measuring the instantaneous values of continuous-time signal in a discrete form." • Sample is a piece of data taken from the whole data which is continuous in the time domain.

In signal processing, sampling is the reduction of a continuous-time signal to a discrete-time signal. A common example is the conversion of a sound wave (a continuous signal) to a sequence of samples (a discrete-time signal). A sample is a value or set of values at a point in time and/or space.

Sampling (signal processing) - Wikipedia

Sampling and Aliasing With this chapter we move the focus from signal modeling and analysis, to converting signals back and forth between the analog (continuous-time) and digital (discrete-time) domains. Back in Chapter 2 the systems blocks C-to-D and D-to-C were introduced for this purpose. The question is, how must we choose the sampling rate in the C-to-D and D-to-C boxes so that the ...

Sampling, by definition (be it for digital or analog signals), is the process of selecting some "samples" of a signal, and then discarding the rest of it. The rationale behind sampling is that not all of the data contained in a signal is essential, and some part(s) of it can be jettisoned.

The sampling theorem is usually known as the Shannon Sampling Theorem due to Claude E. Shannon's paper "A mathematical theory of communication" in 1948.

The ADC both samples the voltage and converts it to a digital signal. The sampling process itself is easy to represent mathematically: given a continuous signal $x(t)$ to be sampled, and a sample interval T , the sampled version of x is simply the continuous version of x taken at integer intervals of T : $x_k = x(kT); k \in \mathbb{Z}$ (1)
